URS02

POLYLITE

Polycarbonate is incredibly efficient and 100 percent transparent, ensuring we can ensure that your shutter enhances your building design as an owner or an architect.

Made from polycarbonate of a non-toxic standard, they are practically unbreakable, scratch resistant and simple to maintain.

URS02

URS02

They are lightweight and therefore simple to run. They can be applied manually or electrically and are suitable for retail stores, shopping malls, doorways, showrooms and halls in particular

ALUMINIUM

URS03

The aluminium shutters are widely used across the market for both commercial and residential use. It is designed as a cost effective measure to prevent entry and to enhance security levels as opposed to grills and doors. Slat 3" with thickness of 0.9mm

ALUMINIUM

The aluminium shutters are light and easy to handle. It is ideal for shop fronts, garage openings, small and low-value warehouses, stairwell opening and car parks.

URS03

It is designed to withstand normal wear and tear from rain and dirt, long term durability, and rust proof. Can be applied with architectural grade outdoor UV protected powder coat finishing

URS03

GALVANISED STEEL

A heavy duty roller shutter is a layer of heavy weight shutter curtain,

URS04

URS04

Made by high tensile strength material as a security barrier. Most common base material to be used is galvanized iron steel; with the option of powder coated finishing, color coated, or natural finishing. Thickness range between 0.7mm to 1.2mm

Generally heavy duty roller shutters is used in warehouse, factories, stockiest, and places with greater security requirement. We recommend this type of shutter best used in electrical operated, for smoother operation experience. Maximum single panel coverage clear opening is W 8000mm x H 5000mm.

FIRE RATED

Vertical shutter URS-2Hours
Fire Rated Thermal
Uninsulated Roller Shutter
Conventional Motorised
Operated Roller Shutter
with Galvelume AZ100 G300
Single Layer Leaf Steel Slat

In order to prevent fire from spreading and enhance the safety in a structure, building or construction, fire-rated elements must be used. A fire rated door is one of those elements, as it sectorises the building and helps prevent the fire and the smoke from spreading to other compartments than where it was originated.

URS06

URS06

They are commonly used in commercial and industrial settings, such as factories, warehouses, and retail stores, but can also be used in residential properties.
